

Library Scientists Live STEM

When Tyler Hahn was in first grade, a STEM lesson on dinosaurs helped him discover his love of learning and evolved into a career of helping others find their own passion for learning.

Curiosity pushed Tyler to explore the world around him and eventually pursue a career in library science. As the youth and special services librarian at the Cherokee Public Library, he uses STEM skills he learned every day.

“I always wake up and feel invigorated about something new,” Tyler said.

At the library, Tyler helps kids find the information they need to learn and succeed academically. While no two days are ever the same, STEM touches almost everything he does. From coding and 3D printing to STEM story time, Tyler works hard to create programs that impact and engage students, parents, educators and more. And all the while, he’s inspiring a love of lifelong STEM learning.
